1 Introduction

This document details Western Power's Price List. For the purpose of section 5.1(f) of the *Electricity Networks Access Code 2004* this document forms part of Western Power's Access Arrangement.

For the avoidance of doubt, the prices within this Price List will apply to all consumption from 1 July 2016. Where consumption is metered with an accumulation meter and the meter reading interval causes some of the metered consumption to lie within the period covered by this price list and the remainder within a previous or subsequent period not covered by this price list, the consumption covered by this price list will be determined by prorating the metered consumption uniformly on a daily basis.

Section 2 lists the reference tariffs for the reference services provided by Western Power as stated in the company's access arrangement.

Sections 4 and 5 detail the reference tariffs, which are based on a number of components. The total charge payable by users under each reference tariff represents the sum of the amounts payable for each component within the relevant reference tariff.

Section 6 details all of the prices that are required to calculate the charges.

Section 7 includes a link to Western Power's website for fees that are referred to in the Applications and Queuing Policy

3 Non-reference services

Where Western Power is providing a User a non-reference service at a connection point, the tariff applicable to that non-reference service is the tariff agreed between the User and Western Power.

4 Distribution Tariff Application Guide

Within this price list the transmission and distribution components of the bundled charges are published, where applicable. The bundled charge is applicable when calculating the charge for the reference tariff, unless otherwise indicated. For the avoidance of doubt, the bundled charge is the sum of the distribution and transmission components of the charge.

At Western Power's discretion, the charges detailed below may be discounted where there are multiple exit points on the same premises that are configured in a non-standard way. These discounts include, but are not limited to, only charging one administration charge per site.

4.3.2 Discount

A discount, based on the percentage of off peak energy consumption (as a proportion of the total energy consumption), applies to this tariff.

The Discount is defined as:

$$\begin{aligned} &\text{For MD} < 1,000 \text{ kVA} && (E_{\text{Off Peak}}/E_{\text{Total}}) * DF \\ &\text{For } 1,000 \leq \text{MD} < 1,500 \text{ kVA} && ((1500 - \text{MD})/500) * (E_{\text{Off Peak}}/E_{\text{Total}}) * DF \\ &\text{For MD} \Rightarrow 1,500 \text{ kVA} && 0 \end{aligned}$$

Where:

- MD is the rolling 12-month maximum half-hourly demand at an exit point (expressed in kVA);
- DF is the discount factor, which is set at 50%
- E_{Off Peak} is the total off peak energy for the billing period (expressed in kWh); and
- E_{Total} is the total energy (both on and off peak) for the billing period (expressed in kWh).

Notes:

1. This discount does not apply to the demand-length portion of the charge.
